SANDVIK Coromant

2020

Solid round tools

MILLING
DRILLING
TAPPING
REAMING

Let us introduce our new catalogs

The catalog consists of two volumes: Rotating tools and Turning tools. In total, over 20,000 standard products released before April 2017 are included.

Turning Tools – General Turning, Parting and Grooving, Thread Turning, Multi-functional Tools, Tool Holding, and Turning Tool Adapters

Rotating Tools – Indexable Milling, Indexable Drilling, Boring, and Rotating Tool Adapters

For our offer of round tools, please see our **Solid Round Tools catalog**.

Use the product overviews to find your area of interest, and a reference will take you to the actual ordering page. The ordering page will then take you to related products, such as holders and inserts, if you follow the references at the bottom of the page.

Our total offer of approximately 55,000 standard products can be found at www.sandvik.coromant.com. If none of these products fit your requirements, we have a wide range of products that can be tailored upon your request.

Please note that product data can change over time. Please visit www.sandvik.coromant.com to be sure of getting the latest measurements and tolerances, get detailed cutting data, and order all available products and spare parts.

Explanation of reference symbols:

- Hole size recommendations
- Cutting data
- Grade description
- Explanation of ISO 13399 parameters
- Code key
- Coolant information
- Reconditioning
- Information

- First Choice
- Good choice
- Not available

Our product portfolio

Everything we do is about supporting workflow, efficiency, and productivity. From experience, we know that this requires different solutions for different customers on different occasions. There is no one size fits all solution. Our solid round tools offer includes three clear-cut solutions to meet your needs.

Versatile

Versatile solutions

A complete range of high performance products that offer high flexibility and cost efficiency.

Optimized

Optimized solutions

A unique line of refined tools for specific needs that provide extreme efficiency, reliability, and durability.

Customized

Customized solutions

Tailor Made and Advanced Engineered products individually designed to meet the highest demands on performance.

How to find the right product

1. Select application type
2. Select the section of our portfolio depending on your demands

- One tool for many materials
- A robust tool for various applications
- Ideal for small batch and varied production

- Tool dedicated for specific material
- Tool refined for specific application
- Ideal for medium to large batch production

- A unique tool customized for your application
- Advanced application knowledge and expert advice
- Tool that is not available in the standard offer

CoroMill® Plura - Versatile

High performance end mills with high flexibility and cost efficiency

Versatile tools designed for high performance and secure machining in a variety of materials, applications, component sizes and shapes, allowing maximum machine utilization.

V C

Application

- Heavy roughing
- Medium roughing
- Roughing with chip breaker
- Profiling
- Chamfer milling

ISO application area:

P M K N S H

For the highest machine utilization in various components and for variable production, you need tools with the highest precision, robustness, and versatility. When precision, stability, and cost-efficient machining is paramount, a CoroMill® Plura versatile end mill is your first choice.

www.sandvik.coromant.com/coromillplura

Product range

- Selected high-quality grades for all materials and conditions
- Robust geometries designed to adapt in different milling applications
- Cylindrical and Weldon shank options
- Straight, with and without chip-dividing cutting edge tool shapes
- Ball nose tools and chamfering tools
- Can be reconditioned up to three times to its original specifications

E14

SANDVIK Coromant

CoroMill® Plura solid carbide end mill for heavy roughing

When to use

Two flutes or three flutes

Key slot

Flutes designed for large chip space

Reliefs designed for stability

Four flutes

More stability thanks to a larger core

Optimal for shoulder milling

SANDVIK Coromant

CoroMill® Plura solid carbide end mill for medium roughing

When to use

When a smooth cut is needed

For soft materials, with an optimized sharp geometry

Problem solver for ramping operations

4 flutes - Good for finishing operations

ISO material	P	M	K	S
Grade	1620	1630		
Shank	Weldon		Cylindrical	

Product range

For multi-material with hardness ≤ 48 HRc

CoroMill® Plura solid carbide end mill for roughing with chip breaker

When to use

When small chip size is needed

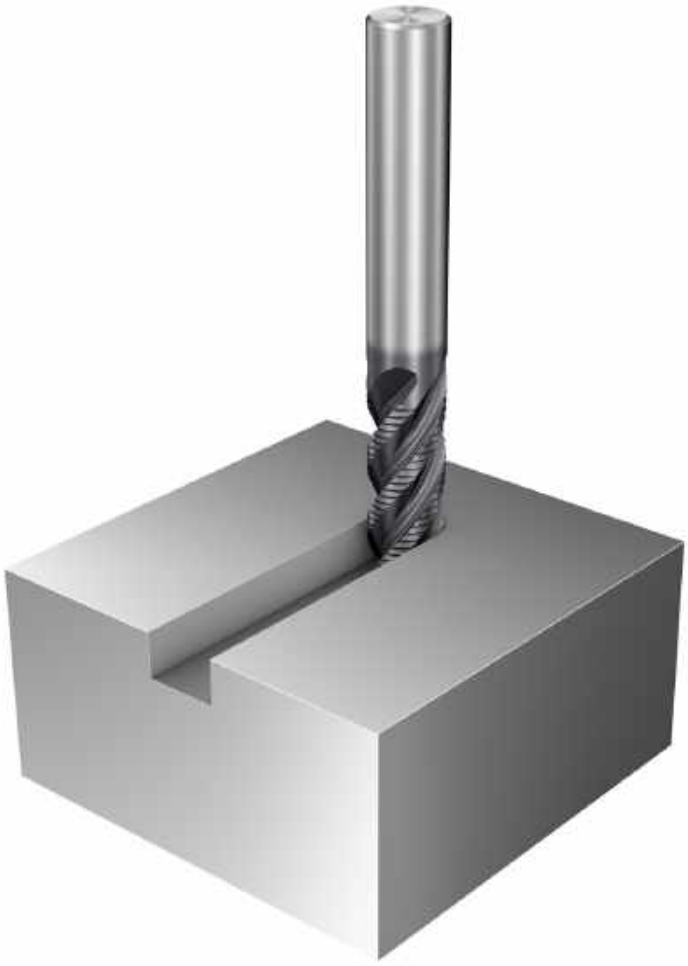
Problem solver in unstable conditions

ISO material	P	M	K	S
Grade	1640			
Shank	Cylindrical	Weldon		

Product range

For stainless steel and steel

For ISO S materials



CoroMill® Plura solid carbide end mill for roughing with chip breaker

For multi-material with hardness ≤ 48 HRc

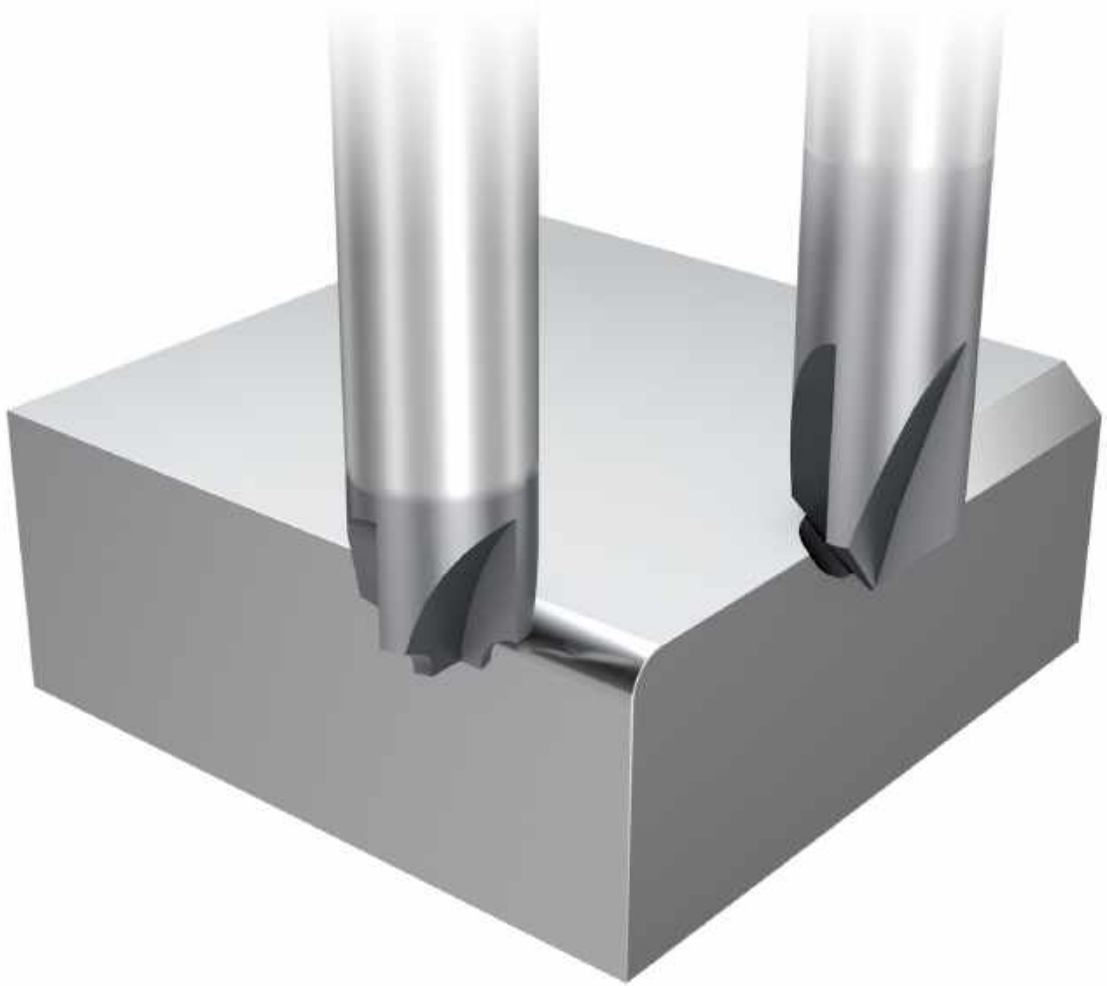
CoroMill® Plura solid carbide end mill for chamfer milling

When to use

Chamfering with the same tool in multiple materials

45-degree and 60-degree chamfer angles

ISO material	P	M	K	S	H
Grade	1620				
Shank	Cylindrical	Weldon			



CoroMill® Plura solid carbide end mill for chamfer milling

For multi-material with hardness ≤ 48 HRc

CoroMill® Plura - Optimized

Top-performing end mills for specific materials and applications

Optimized tools with geometries and grades for specific materials and applications, maximizing production output per time unit.

O C

Application

- Heavy duty milling
- High Feed Side Milling
- Stable multi-operations milling
- Large chip removal
- Hard part milling
- Composite milling
- Finishing
- Micromilling
- High feed face milling
- Profile milling
- Roughing with chip breaker
- Turn milling
- Thread milling

ISO application area:

P M K N S H O

For your most quality-demanding components and difficult applications you need the highest quality tools. When close tolerances and efficient machining is paramount, a CoroMill® Plura optimized solid end mill is your choice.

www.sandvik.coromant.com/coromillplura

Product range

- Perfect combination of a specific high-quality grade and a sophisticated geometry for a specific material and application
- Cylindrical and Weldon shank options
- Straight, spherical, and conical ball nose tools
- Roughing tools with and without chip-dividing geometry
- With and without neck, undersized shanks available
- Tools with internal coolant available
- Can be reconditioned up to three times to its original specifications

E14

CoroMill® Plura solid carbide end mill for heavy duty milling

When to use

First choice for roughing in steel and stainless steel with the highest productivity
2xD full slot capabilities and excellent ramping capabilities

ISO material	P	K	M	S
Grade	1730		1740

CoroMill® Plura solid carbide end mill for high feed side milling

When to use

Excellent in roughing when good surface quality is needed

First choice for CAM-supported, high feed side milling strategies

ISO material	P	K	M	S	
Grade	1630	1640	1740	1745	1710
Shank	Cylindrical		Weldon		

Product range

For stainless steel and steel

For titanium alloys

For nickel-based alloys

CoroMill® Plura solid carbide end mill for high feed side milling

For steel with hardness ≤ 48 HRc

SANDVIK Coromant

CoroMill® Plura solid carbide end mill for hard part milling

When to use

First choice for roughing to semi-finishing in hardened steel in stable conditions
Use in dry conditions

ISO material	P H
Grade	1610
Shank	Cylindrical

Product range

For hardened steel with hardness 43 ≤ HRc ≤ 63

CoroMill® Plura solid carbide end mill for hard part milling

For hardened steel with hardness 43 ≤ HRc ≤ 63

CoroMill® Plura solid carbide end mill for large chip removal

When to use

First choice for roughing in aluminum, graphite and thermoplastic machining

ISO material	N O	
Grade	H10F	N20C
Shank	Cylindrical	Undersized

Product range

For non-ferrous material

For non-ferrous material with silicon content > 9%

CoroMill® Plura solid carbide end mill for finishing

When to use

First choice for finishing in shoulder milling operations

Can be used in roughing operations with low radial engagement a if high feed rate is desired (trochoidal strategy)

ISO material	P	M	K	S	H
Grade	1610		1620		
Shank	Cylindrical				

Product range

For hardened steel with hardness 43 ≤ HRc ≤ 63

For steel and stainless steel with hardness ≤ 48 HRc

CoroMill® Plura solid carbide end mill for edging applications

When to use

When shaping resin-infused material, including CFRP, GRFP, aramid and other composite materials

ISO material	O
Grade	1630 O10A 012M 010M
Shank	Cylindrical

Product range

For composite materials

CoroMill® Plura solid carbide end mill for edging applications

For CFRP materials

CoroMill® 316

Roughing to finishing

Application

- Slot milling
- Helical interpolation
- Shoulder milling
- Profile milling
- High feed face milling
- Chamfer milling

O C

ISO application area

P M K N S

www.sandvik.coromant.com/coromill316

Product range

- Tools with high-feed capability
- Chip-breaker geometry
- Tools with internal coolant
- Geometries for roughing to super-finishing
- Wide assortment of shanks and integrated machine adapters

Coromant EH coupling

The Coromant EH coupling provides reliability and accuracy between the head and shank. It is easy to handle, and the head can be changed in a few seconds.

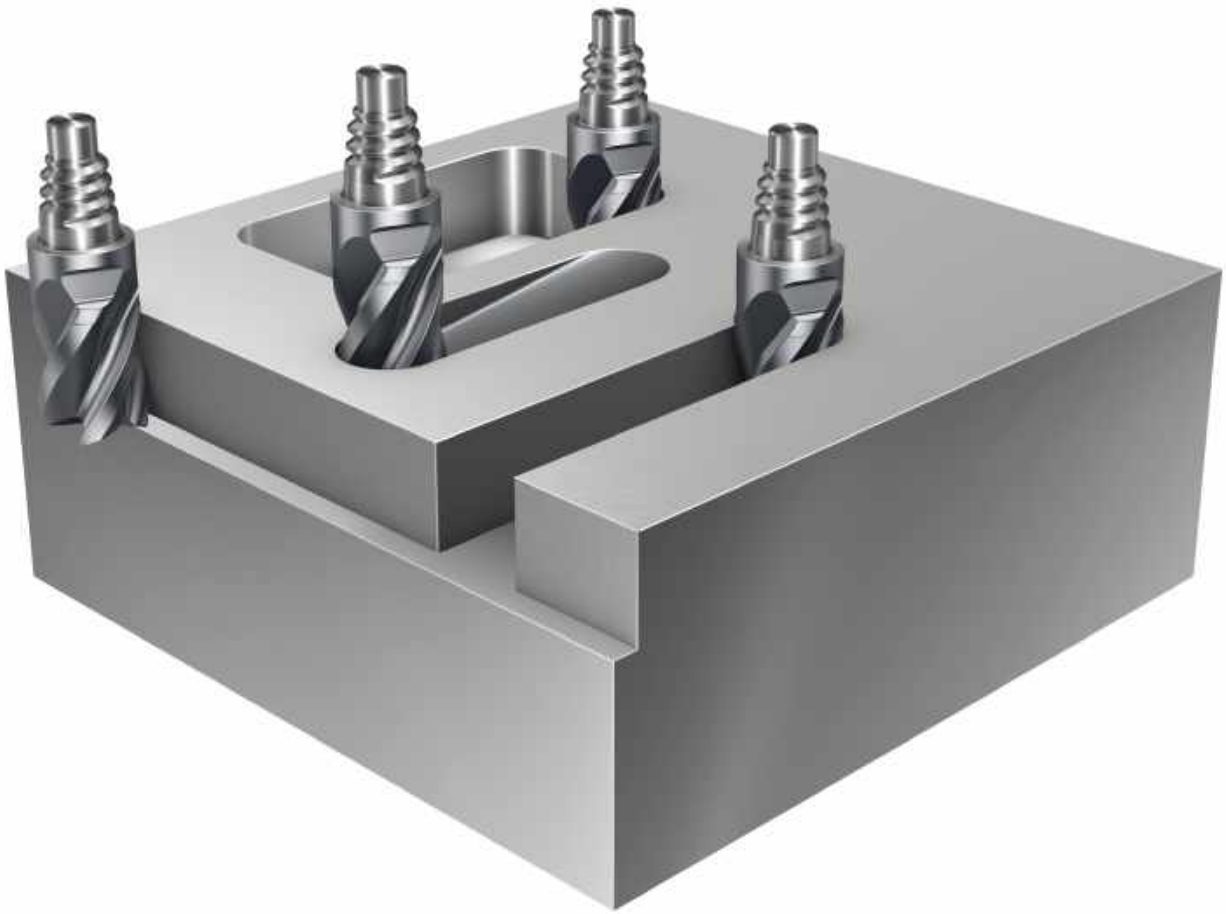
For ordering, see Rotating tools catalog.

CoroMill® 316 solid carbide head for heavy duty milling

When to use

First choice for roughing in ISO P and ISO M

ISO material	P K M S
Grade	1730
Shank	Coromant EH



CoroMill® 316 solid carbide head for heavy duty milling

For stainless steel and steel with hardness ≤ 48 HRc

CoroMill® 316 solid carbide head for stable multi-operations milling

When to use

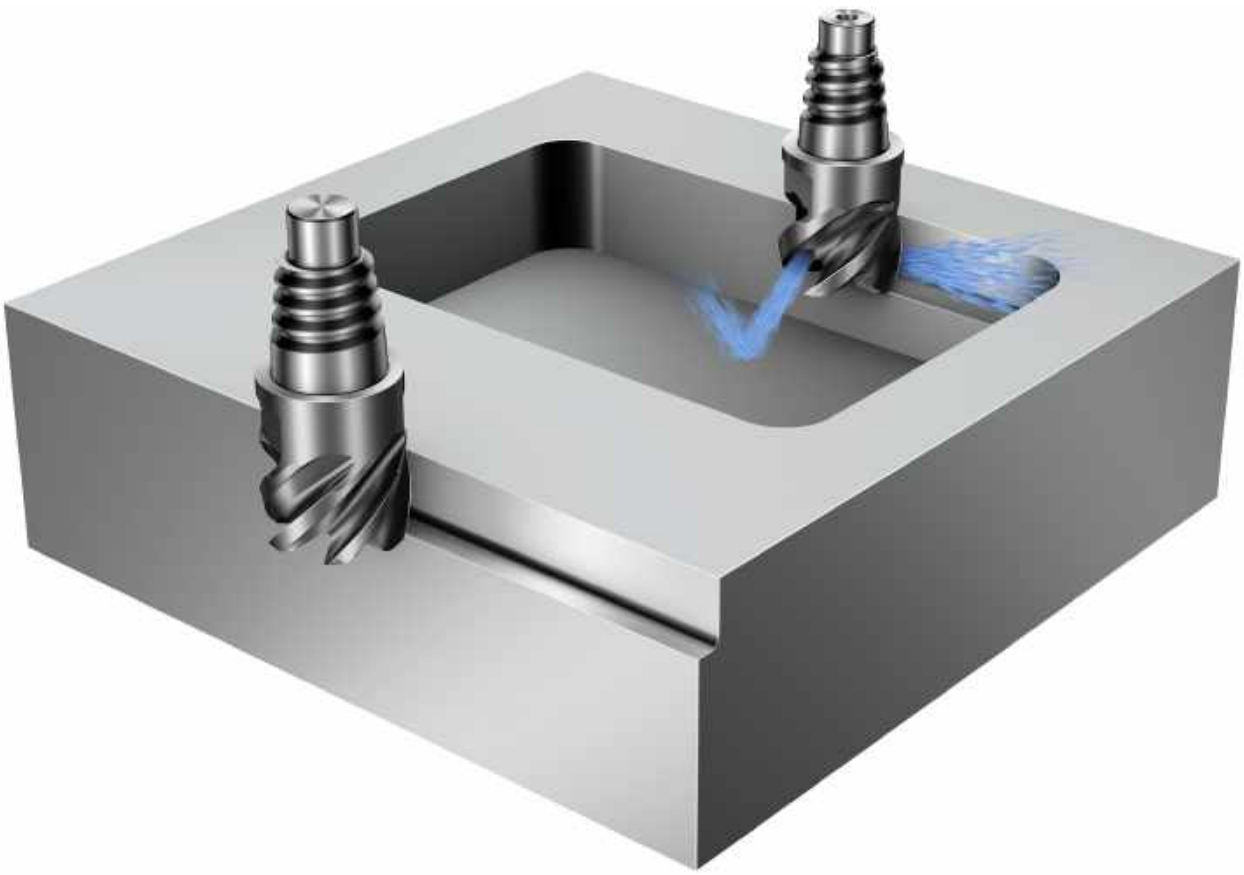
When you need good roughing performance in many different applications and materials

First choice in general milling applications

ISO material	P K M S
Grade	1730
Shank	Coromant EH

Product range

Differential pitch reduces vibration



CoroMill® 316 solid carbide head for stable multi-operations milling

For multi-material with hardness ≤ 48 HRc

CoroMill® 316 solid carbide head for high-feed side milling

When to use

First choice for high feed side milling in titanium alloys

Excellent in intermediate conditions (ae up 10% DC) when good surface quality is needed

ISO material	S
Grade	1745
Shank	Coromant EH

Product range

Dedicated grade for titanium alloys

CoroMill® 316 solid carbide head for high-feed side milling

For titanium alloys

CoroMill® 326

Internal threading and chamfering in small holes

Application

- Internal thread milling
- Chamfer milling

O

ISO application area:

P M K N S H O

Features and benefits

- Three cutting edges for productivity
- Chamfering and back-chamfering of holes with one tool
- Very high-precision and low cutting forces
- Same tool for different pitches
- One grade for all materials
- Partial thread profiles for flexibility

Chamfering

Threading

www.sandvik.coromant.com/coromill326

Recommendations

Use with CoroChuck® 930 for best stability and precision. Always use with cylindrical collets for CoroChuck® 930.

CoroMill® 326 solid-carbide chamfering end mill

For multi-materials

Grades for milling

	P	M	K	N	S	H	O	Wet	Dry	Description
1610	+					++		✗	✓	Ultra fine substrate and CIL coating. Suitable for finishing and semifinishing in ISO H (and hard ISO P) materials. Not suitable for large a_e. For stable conditions.
1620	+	++	+		+	+		✓	✓	Versatile grade similar to 1630. Works in most materials. High wear resistance. Is stronger in ISO S and ISO M compared to 1630.
1630	++	+	++		+		+	✓	✓	Versatile grade similar to 1620. Works in most materials. Is stronger in ISO P and ISO K compared to 1620. Dry machining is preferred.
1640	+	++	+		++			✓	✓	Very tough grade for high chip loads (large a_e). Works in most materials. Works well in wet conditions. Suitable for unstable conditions.
H10F				++			+	✓	✗	Uncoated grade for machining ISO N and some ISO O (e.g., thermoplastics) materials.
N20C				+			++	✓	✓	Diamond coated grade for graphite and composites as well as ISO N with high (roughly >9%) silicon content.
1700						++		✗	✓	Very hard grade for working in ISO H materials.
1710					++			✓	✗	Hard, wear-resistant, fine-grained substrate. New coating with adhesion-reducing properties. Specific grade for nickel-based alloys.
1730	++	+	++		+			✓	✓	Next generation 1730 grade. Versatile grade that is tougher and more versatile compared to older version. Dry machining is preferred.
1740	+	++	+		++			✓	✓	Next generation 1740 grade. New sub micron substrate and TiAlN coating for increased toughness and wider application area compared to older version. Excellent in wet conditions.
1745					++			✓	✗	Tough, sub-micron grain-sized substrate with new silicon coating. Grade dedicated to titanium alloys.
P10	+	+	+		+	+		✓	✓	Only one tool style has this grade. Long ball nose cutter. Grade is very similar to 1620.

CoroDrill® 460

Versatile high-performance solid carbide drills

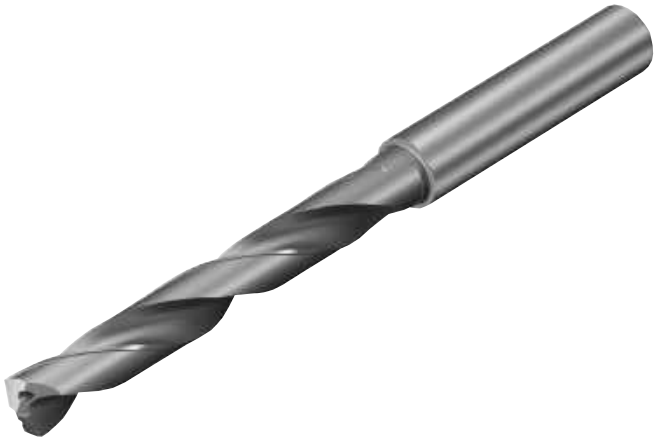
V C

Application

- For a wide range of materials in all industry segments, e.g., general machining, die and mold, automotive, energy and power generation
- Internal and external coolant

ISO application area:

P M K N S H



Features and benefits

- High productivity and consistent tool life
- Exceptional value with no compromise on quality
- Excellent hole quality
- Reduced tooling costs
- Can be reground up to three times, extending tool life even further
- 20 bar coolant pressure

www.sandvik.coromant.com/corodrill460

Recommendations

It is recommended to use hydraulic precision chucks.
It is recommended to use internal coolant, minimum recommended pressure 20 bar

For chucks, see our Rotating Tools catalog.

E14

CoroDrill® 460 solid carbide drill

For multi-materials

E9

E14

CoroDrill® 860-GM

High performance drills optimized for multi-materials

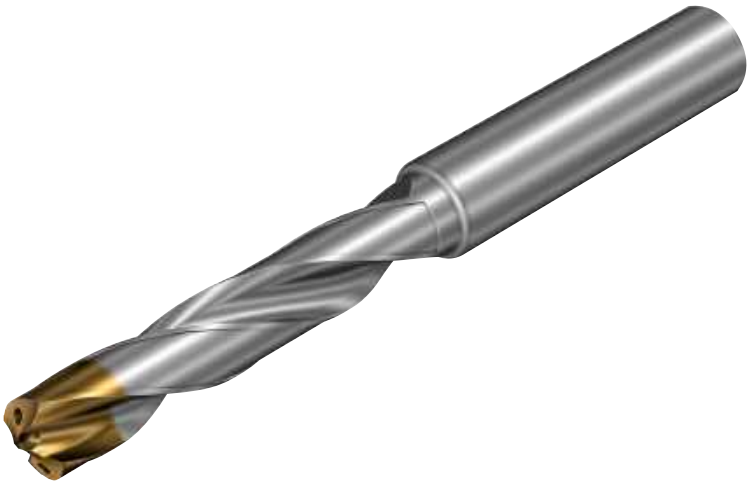
Application

- For a wide range of materials in all industry segments, e.g., general machining, die and mold, automotive, energy and power generation
- Internal and external coolant

O C

ISO application area:

P M K N S H



Features and benefits

- Polished flutes for efficient chip evacuation
- High productivity and consistent tool life
- Exceptional value with no compromise on quality
- Excellent hole quality
- High penetration rate
- Low cutting forces

www.sandvik.coromant.com/corodrill860

Recommendations

It is recommended to use hydraulic precision chucks.
It is recommended to use internal coolant, minimum recommended pressure 20 bar

For chucks, see our Rotating Tools catalog.

CoroDrill® 860

High performance drills optimized for steel

O C

Application

860-PM: Long- and short-chipping steel materials, such as unalloyed steels, low carbon steels, low-alloy steels, high-alloy steels, and steel castings

ISO application area:

P

Features and benefits

- Optimized cutting data
- Low cost per hole
- Improved performance reliability
- Trouble-free chip evacuation
- Long tool life, controlled wear formation
- Consistent hole tolerance
- Can be reconditioned up to 3 times to its original specification

www.sandvik.coromant.com/corodrill860

Recommendations

It is recommended to use hydraulic precision chucks.
It is recommended to use internal coolant, minimum recommended pressure 20 bar

For chucks, see our Rotating Tools catalog.

E14

CoroDrill® 860 solid carbide drill

For steel

Internal coolant supply

CoroDrill® 860

High performance drills optimized for stainless steel

O C

Application

860-MM: Long-chipping, stainless steel materials such as austenitic, super austenitic, ferritic, and duplex stainless steels

ISO application area:

M

Features and benefits

- Optimized cutting data
- Low cost per hole
- Improved performance reliability
- Trouble-free chip evacuation
- Long tool life, controlled wear formation
- Consistent hole tolerance
- Can be reconditioned up to 3 times to its original specification

www.sandvik.coromant.com/corodrill860

Recommendations

It is recommended to use hydraulic precision chucks.
It is recommended to use internal coolant, minimum recommended pressure 20 bar

For chucks, see our Rotating Tools catalog.

E14

CoroDrill® 860 solid carbide drill

For stainless steel

Internal coolant supply

CoroDrill® 860

High performance drills optimized for aluminum

O C

Application

860-NM: Non-ferrous materials, such as aluminum alloys, magnesium and copper-based alloys, including bronze

ISO application area:

N

Features and benefits

- Optimized cutting data
- Low cost per hole
- Improved performance reliability
- Trouble-free chip evacuation
- Long tool life, controlled wear formation
- Consistent hole tolerance
- Can be reconditioned up to 3 times to its original specification

www.sandvik.coromant.com/corodrill860

Recommendations

It is recommended to use hydraulic precision chucks.
It is recommended to use internal coolant, minimum recommended pressure 20 bar

For chucks, see our Rotating Tools catalog.

E14

CoroDrill® 860 solid carbide drill

For aluminum

Internal coolant supply

CoroDrill® 860-SM

Optimized drilling for nickel-based alloys and titanium-based alloys

O C

Application

- Drilling tools suitable for cobalt chrome-, nickel-, and titanium-based alloys
- Up to 5 × diameter
- Hole tolerance: H9
- Optimized for high-performance applications

ISO application area:

S

Features and benefits

- Reliability and process security
- Predictable tool life
- Excellent repeatability
- An industry accredited product with a high quality reconditioning service
- Unique geometry for ISO S giving secure chip control

www.sandvik.coromant.com/corodrillr860

Recommendations

Stable tool holding with CoroChuck™ 930
20 bar coolant pressure
Rigid workpiece clamping

For chucks, see our Rotating Tools catalog.

CoroDrill® 860 solid carbide drill

For heat resistant super alloys

Internal coolant supply

CoroDrill® 861

High stability deep hole drilling up to 30 × DC

O C

Application

- Achievable hole tolerance H8–H9
- Drilling depths: 12–30 × drill diameter
- Clamp with high precision chucks only
- A wide range of workpiece materials
- Conventional drilling, cross holes, angled faces
- Automotive: crankshafts, engine blocks, cylinder heads
- 20 bar coolant pressure

ISO application area:

P M K N

Features and benefits

- Specially designed point geometry helps to reduce thrust forces
- Consistent edge preparation protects the cutting edge from premature chipping and flaking
- Double offset margin patented geometry offers greater stability to the drilling operation
- Internal coolant holes deliver coolant directly to the tip of the drill, even at deep drilling depths
- Can be reconditioned to tools original specification for extended tool life

www.sandvik.coromant.com/corodrill861

Recommendations

Use CoroChuck® 930 with your CoroDrill® 861 to maintain efficient production through quick and easy tool setups and changes

CoroDrill® 862

Solid carbide drill with internal coolant supply for micro holes

Application

- Achievable hole tolerance: H8-H9
- Suitable for all materials
- Drill lengths: 8–12 × drill diameter

O C

ISO application area:

P M K N S

Benefits and features

- High performance in steel, stainless steel, cast iron, and aluminum
- Engineered tool geometry and surface treatment for efficient chip removal
- Good hole entry and exit, tight hole tolerance
- ACM (Advanced Chip Management) flute geometry for small and manageable chips
- Specially designed point geometry reduces thrust forces
- Smooth drill surface enables fast and efficient chip evacuation
- Internal coolant holes deliver coolant directly to the tip of the drill, even at deep drilling depths

www.sandvik.coromant.com/corodrill862

Recommendations

Use CoroChuck® 930 with your CoroDrill® 862 to maintain efficient production through quick and easy tool setups and changes

CoroDrill® 862 solid-carbide drill

For multi-materials

Internal coolant supply

CoroDrill® 863

Drills for CNC, ADU, and robotic machines in aerospace assembly materials

Application

- CNC and ADU operations
- CVD, PCD, and carbide options available
- Material types: Composite, aluminum, titanium, heat resistant super alloys, and stainless steel

O C

ISO application area:

M N S O

Benefits and features

- Low-thrust geometries reduce hole delamination and exit burr
- Stocked items are perfect for testing capability in specific applications
- Point geometry of CFRP cutters can successfully exit woven and unidirectional CFRP

www.sandvik.coromant.com/corodrill863

Available products

- CoroDrill® 863-O: Designed for long life in CFRP stacks
- CoroDrill® 863-OS: Designed for good chip management in CFRP/Titanium stacks
- CoroDrill® 863-N: Designed for high speed machining in aluminum stacks
- CoroDrill® 863-MS: Designed for hard metal stack applications

CoroDrill® 863 solid carbide drill

For CNC & ADU machining in aerospace assembly materials

CoroDrill® 452

Solid carbide drills, reamers, and countersinks

Application

- Portable hand-held machines
- Aerospace rivet and bolt holes
- Carbon fiber reinforced plastics (CFRP)
- Carbon fiber reinforced plastic/metallic-stack materials

O C

ISO application area:

M N S O

Benefits and features

- Close hole tolerances, good surface finish
- Tools optimized for CFRP and metallic-stack materials
- Low-thrust geometries reduce risk of hole delamination and burrs

www.sandvik.coromant.com/corodrill452

A family of tools for rivet and bolt holes. Options such as step drills, reamers, and countersinks are available.

Available products

- CoroDrill® 452.1-C: Designed for drilling CFRP stacks
- CoroDrill® 452.1-CM: Designed for drilling CFRP/metal stacks
- CoroDrill® 452.R-CM: Designed for reaming CFRP/metal stacks
- CoroDrill® 452.C1: Designed for countersinking CFRP

CoroDrill® 452 solid-carbide drill

For handheld machines

For aerospace assembly materials

CoroDrill® 400 and CoroDrill® 430

Highly productive hole-making in aluminum and cast iron

Flexible and precise tool solutions

The straight-flute CoroDrill® 400 is an optimized solution designed for broad use in the automotive industry. It has been meticulously engineered to meet demanding precision requirements.

O C

The spiral-flute CoroDrill® 430 is an optimized solution for broad use in the automotive industry. It has been meticulously engineered to meet demanding requirements for high precision.

ISO application area:

N

Benefits and features

- Easy chip removal
- Straightness of hole and surface finish improved due to double margin
- Multi-steps, chamfers, radius and forms can be achieved
- Easy to recondition
- Fast delivery
- Flexibility

www.sandvik.coromant.com/corodrill400

www.sandvik.coromant.com/corodrill430

Used in the automotive industry for:

Cylinder blocks, cylinder heads, cases, steering knuckles and brake cylinders
Aluminum silicon alloys and all grades of cast iron, including GCI, CGI and nodular
Pre-tapping hole sizes
Chamfer holes and multi-step forms

Straight Flute

For complex, multi-step forms and large step ratios

Three flutes

For opening out existing holes (core drilling)

CoroDrill® 400 solid carbide drill

For aluminum

Internal coolant supply

Drill Type 4 to use DC2 RPM, and DC1 feed rate.

B94 E9

Selecting your cutting data

Chip formation and chip evacuation are critical issues in drilling and depend on the workpiece material, choice of drill/insert geometry, coolant pressure/volume and cutting data. Chip jamming can cause radial movement of the drill and consequently affect hole quality, drill life and reliability, or cause drill/insert breakages.

Chip formation is acceptable when the chips can be evacuated from the drill without disturbance. The best way to identify this is to listen during drilling. A consistent sound means that chip evacuation is good, but an interrupted sound indicates chip jamming. Check the feed force or power monitor. If there are irregularities, chip jamming could be the reason. Look at the chips: if they are long and bent, instead of curled, chip jamming has occurred. Look at the hole: if chip jamming has occurred, an uneven surface will be visible

Effects of cutting speed – v_c

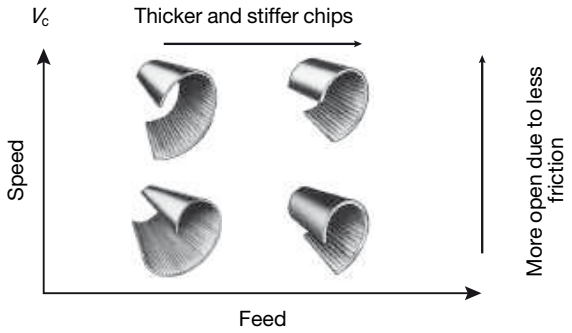
Cutting speed that is too high:
Rapid flank wear
Plastic deformation
Poor hole quality and bad hole tolerance

Cutting speed that is too low:
Built-up edge
Bad chip evacuation
Longer time in cut

Effects of feed – f_n

High feed rate:
Harder chip breaking
Less time in cut
Less tool wear but increased risk of drill breakages
Reduced hole quality

Low feed rate:
Preferable for long-chipping materials
Quality improvement
Accelerated tool wear
Longer time in cut



Achieving good hole quality

Chip evacuation
Make sure chip evacuation is satisfactory. Chip jamming affects hole quality and reliability/tool life. Drill/insert geometry and cutting data are crucial.

Stability, tool set-up
Use the shortest possible drill. Use a rigid and accurate tool holder with minimum run-out. Make sure the machine spindle is in good condition and is well aligned. Ensure that the component is fixed and stable. Establish correct feed rates for irregular, angular surfaces and cross holes.

Cutting data recommendations are valid for internal coolant supply, which gives the best performance.

Preferred pressure min. 15 bar (218 PSI)

If external coolant supply is used:
- More important to adjust cutting data for good chip form and evacuation
- Lower penetration rates than what is possible with internal coolant may be necessary

Cutting data recommendations are valid for internal coolant supply, which gives the best performance.

Preferred pressure min. 15 bar (218 PSI)

If external coolant supply is used:
- More important to adjust cutting data for good chip form and evacuation
- Lower penetration rates than what is possible with internal coolant may be necessary

D

GENERAL NOTE FOR ALL: to be programmed in design program

Note: N1DU is veined PCD and can utilize higher feeds and speeds than solid carbide.
Note: For step drills, calculate the RPM on the largest diameter & the feed on the smallest diameter
Note: For drill types 2, 4, 5 & 6 where the step ratio is above 1.5, i.e. 5.00 mm pilot with a 8.00 mm largest diameter start at min recommended feed rate.
Note: Solid drill Vc is reduced by 20% on coolant drill value
Note: Speed and feed can be within 20% of starting value

Tapping

V
Versatile

O
Optimized

C
Customized

O C

CoroTap™ 100

- Taps with straight flutes
- Mainly used for short chipping materials like cast iron
- Suitable for both through- and blind holes

V O C

CoroTap™ 300

- Taps with spiral flute grinding
- The spiral flute transports the chips out of the hole
- Best option for blind holes

V O C

CoroTap™ 200

- Taps with spiral point grinding
- Pushes the chips forward
- Used for through holes

V O C

CoroTap™ 400

- Taps that form the thread instead of cutting
- For both through- and blind holes
- Available with and without oil grooves

CoroTap™ 200

Applications

- Only for through holes
- Available in many thread forms and standards
- Up to 3 × D depending on materials

V C

ISO application area:

P M K N S

Benefits and features

- Chamfer B (3.5–5 threads) for high process security
- Edge treatment for reduced axial force and torque makes the tool run more smoothly, reduces risk of cutting-edge chipping, and improves surface quality, tool life, and chip formation
- High speed powder steel taps for improved strength, wear resistance, and tool life
- Different coatings and grades are available

- Taps with spiral point grinding
- Pushes the chips forward
- Used for through holes

SANDVIK Coromant

CoroTap™ 300

Applications

- Suitable for blind holes
- Available in many thread forms and standards
- Depths up to 3 × diameter

V C

ISO application area:

P M K N S

Benefits and features

- The design of the spiral flute secures a constant rake angle and gives a constant cutting process
- Back chamfer, used on taps with a high helix angle, reduces torque and chipping
- Taps with a high spiral angle give excellent chip evacuation and possibilities to thread up to 3 × diameter in blind holes
- Taps with a low spiral angle give strong edges and are suitable for tapping tough materials, generating short chips in blind holes
- High speed powder steel taps for improved strength, wear resistance, and tool life
- Solid carbide taps for long tool life and high productivity

- Taps with spiral flute grinding
- The spiral flute transports the chips out of the hole
- Best option for blind holes
- Different helix angle for different applications
- Flute used for both cutting fluid and chip evacuation
- Different threading depths due to application and geometry

C166 C157 E9 E27 C154

CoroTap™ 400

Applications

- Suitable for both through holes and blind holes
- Available in many thread forms and standards
- Depths up to 3.5 × diameter

V C

ISO application area:

P M N S

Benefits and features

- Chamfer C (2–3 threads) and chamfer E (1.5–2 threads). Chamfer E mainly used in blind holes with low clearance
- High speed steel with cobalt taps for improved wear resistance
- High speed powder steel taps for improved strength, wear resistance, and tool life

- Taps that form the thread instead of cutting
- A chip-free solution
- All materials not suitable since there is need of certain ductility. Recommended tensile strength limit is 1200 N/mm^2
- For both through and blind holes
- Available with and without oil grooves

SANDVIK Coromant

CoroTap™ 100

O C

Applications

- Taps optimized for specific materials
- For both through- and blind holes
- Depths up to 2.5 × diameter
- Tolerances ISO K: 6H, 6HX, 2B, 2BX, 3B
- Tolerances ISO N: 6H
- Tolerances ISO H: 6H, 6HX

Benefits and features

- Three coolant holes for optimized strength
- Five flutes to reduce load on cutting edges and to reduce wear
- Unique grade with higher hardness to reduce wear on coating and substrate
- For ISO N materials: taps with interrupted threads for reduced torque

- Taps with straight flutes
- Mainly used for short chipping materials like cast iron
- Suitable for both through and blind holes
- Flute mainly used for cutting fluid but with internal coolant, chip evacuation is also possible

CoroTap™ 200

Applications

- Only for through holes
- Available in many thread forms and standards
- Up to 3 × D depending on materials

O C

Benefits and features

- Chamfer B (3.5–5 threads) for high process security
- Edge treatment for reduced axial force and torque makes the tool run more smoothly, reduces risk of cutting-edge chipping, and improves surface quality, tool life, and chip formation
- High speed powder steel taps for improved strength, wear resistance, and tool life
- Different coatings and grades are available

- Taps with spiral point grinding
- Pushes the chips forward
- Used for through holes

www.sandvik.coromant.com/corotap200

CoroChuck™ 970, see our Rotating Tools catalog.

CoroTap™ 300

Applications

- Suitable for blind holes
- Available in many thread forms and standards
- Depths up to 3 × diameter

O C

Benefits and features

- The design of the spiral flute secures a constant rake angle and gives a constant cutting process
- Back chamfer, used on taps with a high helix angle, reduces torque and chipping
- Taps with a high spiral angle give excellent chip evacuation and possibilities to thread up to 3 × diameter in blind holes
- Taps with a low spiral angle give strong edges and are suitable for tapping tough materials, generating short chips in blind holes
- High speed powder steel taps for improved strength, wear resistance, and tool life
- Solid carbide taps for long tool life and high productivity

- Taps with spiral flute grinding
- The spiral flute transports the chips out of the hole
- Best option for blind holes
- Different helix angle for different applications
- Flute used for both cutting fluid and chip evacuation
- Different threading depths due to application and geometry

C177 C157 E9 E27 C154

CoroTap™ 400

Applications

- Suitable for both through holes and blind holes
- Available in many thread forms and standards
- Depths up to 3.5 × diameter

O C

Benefits and features

- Chamfer C (2–3 threads) and chamfer E (1.5–2 threads). Chamfer E mainly used in blind holes with low clearance
- High speed steel with cobalt taps for improved wear resistance
- High speed powder steel taps for improved strength, wear resistance, and tool life

- Taps that form the thread instead of cutting
- A chip-free solution
- All materials not suitable since there is need of certain ductility. Recommended tensile strength limit is 1200 N/mm^2
- For both through and blind holes
- Available with and without oil grooves

Taps

Material

HM	HSS	HSS-E	HSS-PM	HSS-E-PM
Carbide	High Speed Steel	High Speed Cobalt	High Speed Powder Steel	HSS-E powder metallurgy steel

Grade/Coating

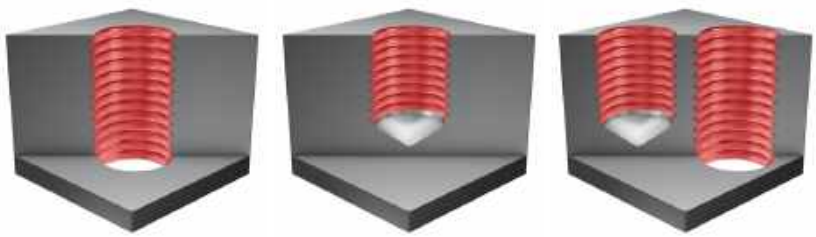
C110/B110	Cool Top	Smooth Top	ST/C145/B145	TiCN
Optimal combination of high hardness and abrasive wear	Optimal combination of high hardness and abrasive wear	Low friction coefficient minimizes material adhesion to the cutting edge	Steam tempered, for protection and prevention of the build-up edge	Titanium Carbon Nitride

CrN	TiN	N	Bright/C150/B150	D115
Chromium Nitride	Titanium Nitride	Nitrited	Uncoated, for reduced adherence in soft materials	Wear-resistant grade with low friction

D210	D125	F125		
Excellent wear resistance both in dry and wet machining	Wear-resistant grade with medium friction	Wear-resistant grade with low friction Optimized for steel		

Hole Type

Through hole **Blind hole** **Through or blind hole**

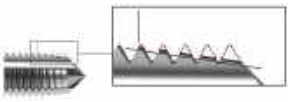


GENERAL HINTS ON TAPPING

The success of any tapping operation depends on a number of factors that affect the quality of the finished product. For the success of your operation, keep the following tips in mind:

1. Select the correct tap design for the component material and type of hole, i.e., through or blind, from the Materials Classification chart.
2. Ensure that the component is securely clamped—lateral movement may cause tap breakage or poor-quality threads.
3. Select the correct size of drill from the relevant catalog page. Remember that the drill sizes for forming taps are different. Wrong choice or bad drilling conditions can cause work hardening of the work piece material that reduces the performance of the tap.
4. Select the correct cutting speed as shown on the catalog product page and in the Guided product search.
5. Use the appropriate cutting fluid for the correct application.
6. Ensure smooth entry of the tap into the hole, as an uneven feed may cause 'bell mouthing.'

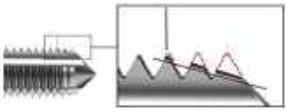
Threading chamfer type



Chamfer type B=3.5 – 5 × threads

Long chamfer:

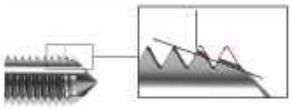
High torque
Best surface quality
Thin chips
Low pressure at the chamfer
Longer tool life
Most common for spiral point tap



Chamfer type C=2 – 3 × threads

Medium chamfer:

Low torque
Good surface quality
Normal thick chips
Normal pressure at the chamfer
Normal tool life
Most common design
Standard chamfer for blind holes
Most common for spiral-flute tap



Chamfer type E=1.5 – 2 × threads

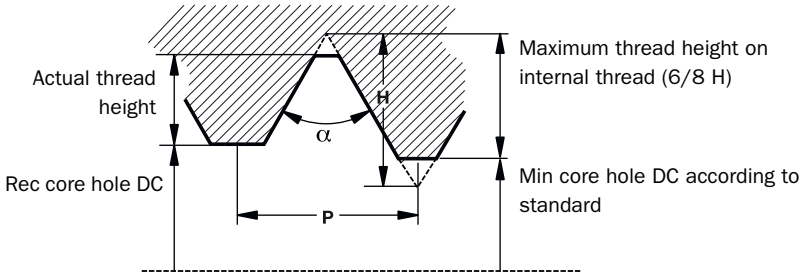
Short chamfer:

Low torque
Good surface quality
Thick chips
High pressure at the chamfer
Shorter tool life
Extreme design
To use when there is not much clearance in the bottom of the hole

What is thread height in %?

Example applies to ISO & UTS standard – 60° threads

Thread height in % is the ratio between actual height and maximum height of the internal thread



Example, M8×1.25

Maximum thread height according to standard is 6/8 H.
H = 0.866 × P
(H = Basic triangle height)
(P = thread pitch)

Maximum thread height is:
6/8 * (0.866 × 1.25) = 0.811 mm
Actual thread height at a core hole of DC 6.9 mm:
(8 - 6.9) / 2 = 0.55 mm
Thread height is then (0.55 / 0.81) × 100 = 68%

Hole size recommendations

Hole diameter guide

This guide gives recommendations for choosing the right diameter for holes to be tapped.

Type of drill and working material determine what hole diameter to choose.

Note that the hole diameter can differ from the drill size, depending on the tolerance of the drill. For best hole size accuracy, use a high-tech solid carbide drill with a tight tolerance level. This makes it possible to choose a drill that is closer to the maximum hole diameter value presented in this guide.

In exceptional cases, such as drilling in very tough material, a larger hole diameter can be selected for increased tool life. Thread strength can still be adequate, but the thread is outside the standard tolerance.

For more technical information, visit www.sandvik.coromant.com.

Reaming

V

Versatile

O

Optimized

C

Customized

CoroReamer™ 435

Flexible and high-performance reamer, suitable for a wide range of materials

Benefits and features

- High productivity thanks to high cutting parameters
- Consistency and productivity saving time and costs
- Excellent surface finish on the component
- Uniform concentricity for long tool life and dimensional accuracy
- High stability thanks to the solid carbide body
- Internal coolant for better chip evacuation and reduced wear

V C

ISO application area:

P K N

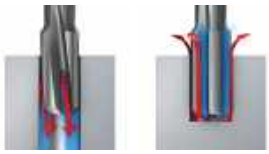
www.sandvik.coromant.com/cororeamer435

Versatile tools designed for high performance and secure machining in a variety of materials, applications, component sizes and shapes, allowing maximum machine utilization.

Flute geometry with extremely unequal flute spacing

Extremely unequal flute spacing means that the divide is not the same for each tooth. As there are no teeth diametrically opposite each other, the reamer produces a hole with improved hole roundness variance.

Through hole Blind hole



E14

CoroReamer™ 435 solid-carbide reamer

Full diameters H7 hole tolerance

Centesimal diameters produce a tighter hole tolerance due to manufacturing of +0.004mm

D14 E9 E28 E14

CoroReamer™ 835

High performance reamer for steel

Application

- For all industry segments, e.g., general machining, die and mold, automotive, energy and power generation
- Available in spiral flute for through holes and straight flute for blind holes
- Through holes, angled surface, and cross hole
- 20 bar coolant pressure

O C

ISO application area:

P K

Benefits and features

- High productivity thanks to high cutting parameters
- Consistency and productivity saving time and costs
- Excellent surface finish on the component
- Uniform concentricity for long tool life and dimensional accuracy
- High stability thanks to the solid carbide body
- Internal coolant for better chip evacuation and reduced wear
- Micro-grained carbide for high hardness and toughness
- Flute geometry with extremely unequal flute spacing

www.sandvik.coromant.com/cororeamer835

Flute geometry with extremely unequal flute spacing

Extremely unequal flute spacing means that the divide is not the same for each tooth. As there are no teeth diametrically opposite each other, the reamer produces a hole with improved hole roundness variance.

CoroReamer™ 835

High performance reamer for stainless steel

Application

- For all industry segments, e.g., general machining, die and mold, automotive, energy and power generation
- Available in spiral flute for through holes and straight flute for blind holes
- Through holes, angled surface, and cross hole
- 20 bar coolant pressure

O C

ISO application area:

M

Benefits and features

- High productivity thanks to high cutting parameters
- Consistency and productivity saving time and costs
- Excellent surface finish on the component
- Uniform concentricity for long tool life and dimensional accuracy
- High stability thanks to the solid carbide body
- Internal coolant for better chip evacuation and reduced wear
- Micro-grained carbide for high hardness and toughness
- Flute geometry with extremely unequal flute spacing

www.sandvik.coromant.com/cororeamer835

Flute geometry with extremely unequal flute spacing

Extremely unequal flute spacing means that the divide is not the same for each tooth. As there are no teeth diametrically opposite each other, the reamer produces a hole with improved hole roundness variance.

Blind hole

Through hole

CoroReamer™ 830

High-feed, exchangeable-head tool for through holes

Application

- For all industry segments, e.g., general machining, die and mold, automotive, energy and power generation
- Available in spiral flute for through holes and straight flute for blind holes
- Achievable hole tolerance: H7
- 20 bar coolant pressure

ISO application area:

P K

Benefits and features

- High surface finish and operation security
- High penetration rate
- Fast and easy head change with high accuracy < 3 µm (120 µinch)
- Effective chip evacuation by directing cutting fluid at each edge
- Achievable hole tolerance: H7
- Brazed cermet inserts in grade P10R
- Short and long shank options
- Head change

A new standard is developed

ISO 13399 is an international standard that strives to simplify the exchange of data for cutting tools. You will notice a slight difference through the new parameters and descriptions of each tool.

For the first time ever, there is a standardized way of describing product data regarding cutting tools. When all tools in the industry share the same parameters and definitions, communicating tool information between software systems becomes very straightforward.

How this benefits you

Basically, it means that your systems can talk to ours, as they all speak the same language. Download product data from our web site and use it directly in your CAD/ CAM software to assemble tools that you use in production. No need to look for information in catalogs and interpret data from one system to another. Imagine how much time this will save you!

Short name	Preferred Name
ADJLN	Minimum adjustment limit
ADJLX	Maximum adjustment limit
ADJRG	Adjustment range
ALP	Axial clearance angle
AN	Clearance angle major
ANN	Minor clearance angle
APMX	Depth of cut maximum
APMX_EFW	Depth of cut maximum – End feed
APMX_FFW	Depth of cut maximum – Side feed
AZ	Maximum plunge depth
B	Shank width
BAWS	Workpiece side body angle
BAMS	Body angle machine side
BBD	Balanced by design
BBR	Balanced by rotational test
BCH	Corner chamfer length
BD	Body diameter
BHTA	Body half taper angle
BN	Face land width
BS	Wiper edge length
BSG	Basic standard group
BSR	Wiper edge radius
CDX	Cutting depth maximum
CEMR	Cutting edge major radius
CF	Spot chamfer
CHBA	Chamfer body angle
CHBL	Chamfer body length
CHW	Corner chamfer width
CICT	Cutting item count
$CICT_E$	Cutting item count – End position
$CICT_P$	Cutting item count – Peripheral position
$CICT_S$	Cutting item count – Side position
$CICT_T$	Cutting item count – Total
CND	Coolant entry diameter
CNSC	Coolant entry style code
CNT	Coolant entry thread size
COATING	Coating
CP	Max coolant pressure
CRKS	Connection retention knob thread size
CRNT	Coolant radial entry thread size
CTPT	Operation type
CUTDIA	Work piece parting diameter maximum
CW	Cutting width
CWN	Minimum cutting width
CWTOLL	Cutting width lower tolerance
CWTOLU	Cutting width upper tolerance
CWX	Cutting width maximum
CXSC	Coolant exit style code
CZC	Connection size code
CZC_{MS}	Connection size code machine side
CZC_{WS}	Connection size code workpiece side
D1	Fixing hole diameter
DAH	Diameter access hole
DAXIN	Axial groove inside diameter minimum

DAXN	Minimum axial-groove outside diameter
DAXX	Maximum axial groove outside diameter
DBC	Diameter bolt circle
DC	Cutting diameter
DCB	Connection bore diameter
DCBN	Connection bore diameter minimum
DCBX	Connection bore diameter maximum
DCF	Cutting diameter face contact
DCIN	Cutting diameter internal
DCN	Minimum cutting diameter
DCON	Connection diameter
$DCON_{MS}$	Connection diameter machine side
$DCON_{WS}$	Connection diameter work piece side
DCPS	Data chip provision size
$DCSF_{MS}$	Contact surface diameter machine side
$DCSF_{WS}$	Workpiece side contact surface diameter
DCX	Maximum cutting diameter
DHUB	Hub diameter
DIX	Maximum tool changer interference diameter
DMIN	Minimum bore diameter
DMM	Shank diameter
DN	Neck diameter
DRVCT	Drive count
DSGN	Design
EPSR	Insert included angle
FHA	Flute helix angle
FLGT	Flange thickness
FTDZ	For thread diameter size
H	Shank height
HA	Thread height theoretical
HB	Thread height difference
HBH	Head bottom offset height
HC	Actual thread height
HF	Functional height
HRY	Lowest point from reference plain
HTB	Body height
HTH	Height
IC	Inscribed circle diameter
INSL	Insert length
INSUC	Insert usage code
IZC	Insert size code
KAPR	Tool cutting edge angle
KAPR_EFW	Tool cutting edge angle – End feed
KCH	Corner chamfer
KRINS	Major cutting-edge angle
KWW	Keyway width
L	Cutting edge length
LAMS	Inclination angle
LB	Body length
LCF	Chip flute length
LCOX	Cut off length maximum
LE	Cutting edge effective length
LF	Functional length
LFN	Minimum functional length
LH	Head length
LPR	Protruding length
LS	Shank length
LSC	Clamping length
LSCN	Minimum clamping length
LSCS	Distance to clamping start
LSCX	Maximum clamping length
LSD	Dead shank length
LU	Usable length (max. recommended)
LU_BFW	Usable length – Back facing
LUX	Usable maximum length
MHD	Mounting hole distance
MIID	Master insert identification
$MIID_E$	Master insert identification – End position
$MIID_S$	Master insert identification – Side position
$MIID_C$	Master insert identification – Central position
$MIID_P$	Master insert identification – Peripheral position
$MIID_I$	Master insert identification – Intermediate position
MMCC	Code for preset torque
MMCX	Max cutting torque
NOF	Flute count
NT	Tooth count
OAH	Overall height
OAL	Overall length
OAW	Overall width

OH	Overhang recommended
OHN	Minimum overhang
OHX	Maximum overhang
ORDCODE	Order code
PCL	Peripheral cylindrical length
PDX	Profile distance ex
PDY	Profile distance ey
PHD	Premachined hole diameter
PHDX	Maximum premachined hole diameter
PL	Point length
PNA	Profile included angle
PRFRAD	Profile radius
PRSPC	Profile specification
PSIR	Tool lead angle
PSIRL	Major left hand cutting edge angle
PSIRR	Major right hand cutting edge angle
PSW	Pre-machined slot width
RADH	Radial body height
RADW	Radial body width
RAR	Right-hand relief angle
RE	Corner radius
REL	Corner radius left
RER	Corner radius right
RETOLL	Corner radius lower tolerance
RETOLU	Corner radius upper tolerance
RGL	regrind length
RMPX	Maximum ramping angle
RPMX	Rotational speed maximum
S	Insert thickness
SDL	Step diameter length
SIG	Point angle
SPTL	Split line
SSC	Insert seat size code
SSC_E	Insert seat size code – End position
SSC_P	Insert seat size code – Peripheral position
SSC_S	Insert seat size code – Side position
STA	Step included angle
SUBSTRATE	Substrate
TCDC	Tolerance class cutting diameter
TCDCON	Connection diameter tolerance
TCDMM	Shank diameter tolerance
TCHA	Achievable hole tolerance
TCHAL	Achievable hole tolerance lower
TCHAU	Achievable hole tolerance upper
TCT	Tolerance class tool
TCTR	Thread tolerance class
TD	Thread diameter
TDZ	Thread diameter size
TFLA	Tap floating length ahead
TFLB	Tap floating length behind
TG	Taper gradient
THBTP	Thread back taper property
THCA	Thread helix correction angle
THCHT	Threading chamfer type
THFT	Thread form type
THFTS	Thread form standard series
THL	Thread length
THUB	Hub thickness
TP	Thread pitch
TPI	Threads per inch
TPIN	Minimum threads per inch
TPIX	Maximum threads per inch
TPN	Minimum thread pitch
TPT	Thread profile type
TPX	Maximum thread pitch
TRMAX	Tap range max
TQ	Torque
TSYC	Tool style code
TTP	Thread type
ULDR	Usable length diameter ratio
VCX	Maximum cutting speed
W1	Insert width
WB	Body width
WF	Functional width
WFCIRP	Width to cutting item reference point
WSC	Clamping width
WT	Weight of item
ZEFF	Face effective cutting edge count
ZEFP	Peripheral effective cutting edge count (ZEFP)
ZWX	Maximum number of Wiper inserts

Conversion table

Metric to imperial

Distance

1 meter = 39.370 inch
1 meter = 3.281 feet
1 millimeter = 0.039 inch

Weight

1 kilogram = 2.205 pounds
1 kilogram = 35.274 ounces

Torque

1 Newton meter (Nm) = 0.738 pound-force feet (ft-lbs)

1 Newton meter (Nm) = 8.851 pound-force inches (in-lbs)

Imperial to metric

Distance

1 inch = 25.4 millimeter
1 foot = 0.3 meter
1 foot = 304.8 millimeter

Weight

1 pound = 0.45 kilogram
1 ounce = 28.35 gram

Torque

1 pound-force foot (ft-lbf) = 1.4 Newton meter (Nm)

1 pound-force inch (in-lbf) = 0.1 Newton meter (Nm)

Formulas and definitions:

	Metric	**Imperial**
v_c = Cutting speed	m/min (meter/minute)	ft/min (feet/minute)
n = Spindle speed	rpm (revolution per minute)	
v_f = table feed	mm/min	inch/min
z_n = total number of cutting edges		
z_c = number of effective cutting edges		
f_z = feed per tooth	mm/z	inch/z
f_n = Feed per revolution	mm/rev	inch/rev
h_{ex} = maximum thickness	mm	inch
a_p = Cutting depth	mm	inch
l_a = insert width	mm	inch
a_e = cutting width	mm	inch
a_e/D_c % = Radial immersion	%	%
T = Machining time	min	min
Q = Metal removal rate	cm^3/min	$inch^3/min$
nap = number of passes		
TPI = threads per inch		
k_c = specific cutting force	N/mm^2	lbs/in^2
R_a = Surface roughness	µm	µin

Insert size

iC = inscribed circle in inch

△ = cutting edge length in mm

Ifind

Our most practical tools collected for your convenience

You are online, you are on the move, and you are in the workshop. Wherever you are, you can access the features you need through the Ifind app.

The app will help you find tools, solutions, or the information you need for your activities. You can get tool recommendations, make purchases, track your order, and even educate yourself. What do you want to do today?

Everything you find in the Ifind app is available on any device.

Available on the App Store

ANDROID APP ON Google play

Reconditioning

We offer more than just traditional "regrinding." Our reconditioning service guarantees you will get the original performance of your tools to reduce your cost per application.

What we offer

100%

Reliability
Our knowledgeable specialists are available to offer support.

x3

Original performance
The original tool quality is guaranteed — up to three times.

50%

Savings
With reconditioning, you can reduce your tool costs by up to 50%.

Products in service

Drilling

Milling

Reaming

As indicated by the reconditioning symbol on the family and product pages.

Additional information

Reconditioning box
The box can be ordered in two sizes:
- Small (300 × 200 × 138 mm)
  Article number: 6949557
- Medium (400 × 300 × 138 mm)
  Article number: 6949558

All Sandvik Coromant tool types can be shipped in the same box.

Reconditioning service
- Tools will be inspected prior to reconditioning to ensure the tool can be reconditioned. If they cannot be reconditioned, the tools will be returned to you.
- A laser mark on the tool shank indicates each reconditioning service performed.
- The tools are delivered back in the original packaging.

What happens with your tools?
- Complete geometry restoration
- Drill length is reduced
- End mill diameter and length are reduced
  - Minimum diameter is about 0.9 × DC
- Reamer diameter tolerance is maintained

For prices, contact your local Sandvik Coromant representative.

For the sake of the environment

Get into the Coromant Recycling Concept (CRC) now!

The Coromant Recycling Concept (CRC) is a comprehensive service for used carbide inserts (including CBN and PCD if “carrier” is cemented carbide) and solid carbide tools offered by Sandvik Coromant to all its customers.
In the light of increasing consumption of non-renewable raw materials, the economic management of dwindling resources is a duty owed by all manufacturers.
Sandvik Coromant is playing its part by offering to collect used carbide inserts and solid carbide tools and recycle them in the most environmentally friendly way.
All used hard-metal inserts are collected in the collection box at the workplace.
When the collection box is sufficiently full, its contents are transferred to the transport box.
The full transport box is then sent to the nearest Sandvik Coromant office or to your Coromant dealer who can also give you more information.

The benefits of the CRC speak for themselves

- A one-stop worldwide recycling system.
- For direct and trade customers.
- Simple procedure with collection and transport boxes.
- Less waste, easing the burden on the environment.
- Better utilisation of resources.
- Other manufacturers' carbide inserts are also accepted.

Order collection boxes for each lathe, milling machine, drill or for your machining center. We recommend one collection box for inserts and one separate box for solid carbide tools for each cutting workplace.
For detailed instructions on how to sell your used cemented carbide, please visit www.sandvik.coromant.com and select your market.

	Order numbers
Collection box:	91617
Transport box for solid carbide tools (wooden):	92994
Transport box inserts (wooden):	92995

Safety information

Safety information in connection with grinding of cemented carbide

Material compositon

Tool holders

Tool holders mainly contain iron (FE), and low alloy elements such as chromium, nickel, manganese, molybdenum and silicon.

Indexable inserts/cutting tools/round tools

Substances in cemented carbide products contain mostly wolfram carbide and cobalt. They may also contain carbides and carbonitrides of the following elements: titanium, tantalum, niobium, chromium, molybdenum and vanadium.

Routes of exposure

Grinding or heating of hard metal blanks or hard metal products will produce dust or fumes with dangerous ingredients that can be inhaled, swallowed or come in contact with the skin or eyes.

Acute toxicity

The dust is toxic by inhalation. Inhalation may cause irritation and inflammation of the airways. Significantly higher acute inhalation toxicity has been reported during simultaneous inhalation of cobalt and tungsten carbide compared to inhalation of cobalt alone.

Skin contact can cause irritation and rash. Personnel whose skin is sensitive may experience an allergic reaction.

Chronic toxicity

Repeated inhalation of aerosols containing cobalt may cause obstruction in the airways. Prolonged inhalation of increased concentrations may cause lung fibrosis or lung cancer. Epidemiological studies indicate that workers exposed in the past to high concentrations of tungsten carbide/cobalt carried an increased risk of developing lung cancer.

Cobalt and nickel are potent skin sensitizers. Repeated or prolonged contact can cause irritation.

Risk phrases

Toxic: danger of serious damage to health by prolonged exposure through inhalation

Toxic by inhalation

Limited evidence of a carcinogenic effect.

May cause sensitization by inhalation and skin contact

Preventive measures

Avoid formation and inhalation of dust. Use adequate local exhaust ventilation to keep personal exposure well below the nationally authorised limits.

If ventilation is not available or adequate, use respirators nationally approved for the purpose.

Use safety goggles or glasses with side shields when necessary.

Avoid repeated skin contact. Wear suitable gloves. Wash skin thoroughly after handling.

Use suitable protective clothing. Launder clothing as needed.

Do not eat, drink or smoke in the working area. Wash skin thoroughly before eating, drinking or smoking.

1	2	3	4		5	6	7	8	9	10	11	12	13	14

1 Direction of rotation

R Right hand
L Left hand

2 System of measurement

A Inch version

3 Type of tool

21 End mill

4 Drilling function

5 Non-drilling
6 Drilling

6 Number of teeth

1-9 1 to 9 teeth
A-Z 10 to 32 teeth

7 **Coolant**

C = Internal coolant supply
- = External coolant supply

8 Cutting diameter

Inch tools.
Cutting diameter DC in 1/64 inch.

Example: 10 = 5/32 inch

Metric tools.
Cutting diameter DC in 1/10 mm.

Example: 100 = 10.0 mm

9 Helix angle

Degree of helix rounded to nearest 5 degrees

12 Length of shank

S Short shank length
C Long shank length
K Shank length > "C"
L Shank length > "K"
X Shank length > "L"
E Short LF and LU
I Medium LF, medium LU
J Medium LF, long LU
O Long LF, medium LU
P Long LF, long LU

13 Max cutting depth, APMX

Inch tools.
Cutting length in 1/16 inch
If DC < 1/8 in 1/64 inch
Example: 09 = 9/16 inch for DC 3/16 inch

Metric tools.
Cutting length in mm
If D_c or D_{c2} < 3mm in 1/10 mm
Example:
07 = 7 mm for DC 6 mm
70 = 7 mm for DC 2.5 mm

Code key for CoroMill® Plura

5 Basic design of end mill

0	Concave chamfer end mill	**6**	Full radius (ball nose) with spherical form
1	Square form with/without corner chamfer, tight tolerance at DC	**7**	Conical straight form
2	Square form with corner radius	**8**	45° chamfer end mill
3	Square form with/without corner chamfer	**9**	30° chamfer end mill
4	Full radius (ball nose) form (6 or less teeth)	**H**	High feed end mill
5	Conical full radius (ball nose) form (6 or less teeth)	**T**	Turn-mill end mill

10 Corner radius/Conical angle

Corner radius				**Conical angle**	
Metric tools.		Inch tools.		Metric tools.	
– No radius		– No radius		– No radius/Angle	
A	<0.5 mm	A	1/64 inch	M	0.5°

1 Series

1: Versatile
2: Optimized

2 Face geometry

S: Straight corner radius, center cut

F: Straight corner radius, no center cut

P: Straight, center cut

N: Straight, no center cut

B: Ball nose

C: Chamfer tools

H: High-feed cutter

U: Chamfer radius

T: Turn mill

3 Flute helix angle

0: 0°<FHA≤15°
1: 15°<FHA≤25°
2: 25°<FHA≤35°
3: 35°<FHA≤45°
4: 45°<FHA≤55°
5: 55°<FHA≤65°

4 Average cutting length of tool style (APMX/DC)

0: 0-0.5 x DC
1: 0.6-1.0 x DC
2: 1.1-1.5 x DC
3: 1.6-2.0 x DC
4: 2.1-2.5 x DC
5: 2.6-3.0 x DC
6: 3.1-3.5 x DC
7: 3.6-4.0 x DC
8: 4.1-5.0 x DC
9: > 5.0 x DC

5 Running number to differentiate between tool style codes

6 Cutting diameter (DC) in 1/100.

E.g. 1200 = 12.00 mm

7 Corner radius, chamfer or chamfer radius in 1/100.

E.g. Corner radius 200 = 2 mm.
E.g. Chamfer 045 = 45°

8 Coolant

- No coolant
C: Radial exit coolant
A: Axial exit coolant

9 Primary ISO material
